Outstanding contributors of this research group

Jia Ping

As the leader and organizer of the group, he developed the theories and methods of multi-gimbal interference isolation inertial stabilization, established the long distance

Ding Yalin

He established the theories and methods of large lenses and mirror support, compound multi-level thermal control, vibration reduction and sub-aperture self-collimation auto

He developed the technology of platform stabilization, airborne laser irradiation and infrared radiation measurement, electro-optical sighting and multispectral co-aperture

70

Imaging system participated in the 70th anniversary of the Anti-Japanese War parade
